DETAILED ACTION

1. The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 2617.

Allowable Subject Matter

2. **Claims 1-5, 7, 10-27** (*renumbered as 1-24, respectively*) are allowed.
3. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed because the closest prior art, Hsu et al. (US 2005/0111358 A1), either singularly or in combination, fail to anticipate or render obvious a method for use in a wireless communication network, comprising sending, from a base station, at least one trigger corresponding to a trigger condition, the trigger parameter comprising at least one of a first parameter relating to power headroom increase at the mobile station, and a second parameter relating to power headroom decrease at the mobile station, and in response to the occurrence of the trigger condition, receiving in a reverse wireless link, information relating to status of a buffer in the mobile station and data rate used by the mobile station.

Claim 14 is allowed because the closest prior art, Hsu et al. (US 2005/0111358 A1), either singularly or in combination, fail to anticipate or render obvious an article comprising at least one storage medium containing instructions that when executed cause a mobile station to detect that a trigger condition has occurred, the trigger condition comprising one of a power headroom increase at the mobile station exceeding a first value, and a power headroom decrease at the mobile station exceeding a second value; send, in a reverse wireless link in response to detecting the trigger condition, a message having at least two field that contain information indicative of a data rate for

transmission by the mobile station in the reverse wireless link, the information based on at least one of buffer occupancy and power headroom.

Claim 20 is allowed because the closest prior art, Hsu et al. (US 2005/0111358 A1), either singularly or in combination, fail to anticipate a mobile station with a controller for sending information relating to a status of a buffer and information relating to a data rate over a wireless link in response to a trigger condition comprising a current power headroom differing from a previous power headroom by more than a predetermined amount.

Claims 2-5, 7, 11-13, 15-19, 21-27 are allowed as being dependent upon independent claims that have been allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
